

# **Greenhouse Gas Protocol Report for The University of Edinburgh**

Assessment Period: August 2010 - July 2011

Produced on March 14, 2013 by Our Impacts on behalf of Carbon Masters

## **Assessment Details**

## **Consolidation Approach**

**Operational Control** 

## **Organisational Boundaries**

Operations of The University of Edinburgh

### Included

- Academic estate
- Accommodation

## **Operational Boundary**

- Electricity
- Fuel oil
- Incinerated waste
- Landfilled waste
- Natural gas
- Other fuel(s)
- Composted waste
- Electricity
- Recycled waste
- Vans
- Water supply
- Water treament

## **Quality Assurance Assessor**

• Aphra Morrison - aphra@carbonmasters.co.uk

Assessment Summary for Accommodation	1:

## Introduction

A greenhouse gas (GHG) emissions assessment quantifies the total greenhouse gases produced directly and indirectly from a business or organisation's activities. Also known as a carbon footprint, it is an essential tool, providing your business with a basis for understanding and managing its climate change impacts.

A GHG assessment quantifies all seven Kyoto greenhouse gases where applicable and is measured in units of carbon dioxide equivalence, or  $CO_2e^1$ . The seven Kyoto gases are carbon dioxide  $(CO_2)$ , methane  $(CH_4)$ , nitrous oxide  $(N_2O)$ , hydrofluorocarbons (HFCs), nitrogen trifluoride  $(NF_2)$ , sulphur hexafluoride  $(SF_8)$  and perfluorocarbons (PFCs). The global warming potential (GWP) of each gas is illustrated in the Table 1.

Table 1. GWP of Kyoto Gases (IPCC 2007)

Greenhouse Gas	GWP
Carbon dioxide (CO <sub>2</sub> )	1
Methane (CH <sub>4</sub> )	25
Nitrous oxide (N <sub>2</sub> O)	298
Hydrofluorocarbons (HFCs)	124 - 14,800
Perfluorocarbons (PFCs)	7,390 - 12,200
Nitrogen trifluoride (NF <sub>3</sub> )	17,200
Sulphur hexafluoride (SF <sub>6</sub> )	22,800

This assessment has been carried out in accordance with the World Business Council for Sustainable Development and World Resources Institute's (WBCSD/WRI) Greenhouse Gas Protocol; a Corporate Accounting and Reporting Standard. This protocol is considered current best practice for corporate or organisational greenhouse gas emissions reporting. GHG emissions have been reported by the three WBCSD/WRI Scopes.

Scope 1 includes direct GHG emissions from sources that are owned or controlled by the company such as natural gas combustion and company owned vehicles. Scope 2 accounts for GHG emissions from the generation of purchased electricity, heat and steam generated off-site. Scope 3 includes all other indirect emissions such as waste disposal, business travel and staff commuting. Reporting of these activities is optional under the WBCSD/WRI GHG Protocol, but as they can contribute a significant portion of overall emissions Ecometrica recommends they are reported where applicable.

A GHG assessment is an essential tool in the process of monitoring and reducing an organisation's climate change impact as it allows reduction targets to be set and action plans formulated. GHG assessment results can also allow organisations to be transparent about their climate change impacts through reporting of GHG emissions to customers, shareholders, employees and other stakeholders. Regular assessments allow clients to track their progress in achieving reductions over time and provide evidence to support green claims in external marketing initiatives such as product labelling or CSR reporting. Ecometrica GHG assessments are designed to be transparent, consistent and repeatable over time.

<sup>&</sup>lt;sup>1</sup> Carbon dioxide equivalent or  $CO_2$ e is a term for describing different greenhouse gases in a common unit. For any quantity and type of greenhouse gas,  $CO_2$ e signifies the amount of  $CO_2$  which would have the equivalent global warming impact.

## **Data Quality and Availability**

In order to provide the most accurate estimate of an organisation's GHG emissions, primary (actual) data should be used where it is available, up to date and geographically relevant. Secondary data in the form of estimates, extrapolations and industry averages may be used when primary data is not available. Table 2 details the quality of data submitted for this assessment with the key assumptions used stated below.

## **Data Quality Overview**

Table 2. Data Quality and Availability

Source of emissions	Data quality
Company-Owned Vehicles	
Fuel oil	Complete
Other fuel(s)	Mixed
Vans	Complete
Premises	
Natural gas	Complete
Water supply	Complete
Other fuel(s)	Complete
Electricity	Complete
Water treament	Estimated
Fuel oil	Complete
Electricity	Complete
Waste	
Recycled waste	Mixed
Incinerated waste	Mixed
Landfilled waste	Mixed
Composted waste	Complete

# Assessment Summary for The University of Edinburgh Gross Overall Emissions: 89,745 tCO<sub>2</sub>e

#### **Key Performance Indicators**

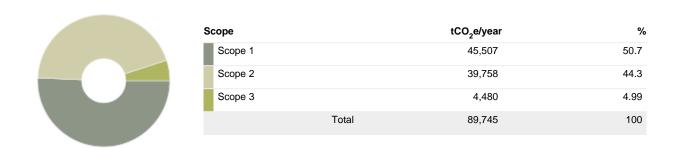

Absolute GHG emissions will vary over time and often correspond to the expansion or contraction of an organisation. It is useful therefore to use reporting metrics that take these effects into account and monitor relative GHG emissions intensity. A common emissions intensity metric is tonnes of CO<sub>2</sub>e per full time equivalent. This has been calculated, along with other relevant metrics, in the table below:

Data	KPI
28,974 Number of students	3.1 tCO <sub>2</sub> e per Student
785,000 Floor area (square metres)	0.114 tCO <sub>2</sub> e per Floor area (square metres)
677,000 Thousand GBP Revenue (£)	0.133 tCO <sub>2</sub> e per Thousand GBP Revenue (£)
7,828 Full Time Equivalent Employees	11.5 tCO <sub>2</sub> e per Full Time Equivalent Employee

### Summary by Activity (tCO<sub>2</sub>e)

### Summary by WBCSD/WRI Scope (tCO<sub>2</sub>e)

#### **Summary by Greenhouse Gas**

Greenhouse Gas	GWP	tGHG/year	tCO <sub>2</sub> e/year
CO <sub>2</sub>	1	87,970	87,970
CH <sub>4</sub>	25	24.2	606
$N_2O$	298	1.18	353
Biogenic CH <sub>4</sub>	24	1.11	26.7
CO <sub>2</sub> e	1	789	789

Total 89,745

## **Detailed Results**

## **Detailed Summary by WBCSD/WRI Scope**

Source of Emissions	tCO <sub>2</sub> /yr	tCH <sub>4</sub> /yr	tN <sub>2</sub> O/yr	Total Emissions (tCO <sub>2</sub> e/yr)	%
Scope 1 Total	45,353	3.15	0.251	45,507	50.7%
Company-Owned Vehicles Total	366	0.00874	0.00971	369	0.411%
Fuel oil	4.39	2.27e-4	0.00148	4.84	0.00539%
Other fuel(s)	360	0.0085	0.00821	363	0.405%

Waste Total	16.6	20.1	0.0833	571	0.636%
Composted waste	0	0	0.0833	51.5	0.0574%
Incinerated waste	16.6	0	0	16.6	0.0185%
Landfilled waste	0	20.1	0	503	0.56%
Recycled waste	0	0	0	0	0%
Total	87,970	24.2	1.18	89,745	100%

# **Summary by Company Unit**

Company Unit	tCO <sub>2</sub> e/year	FTE	tCO <sub>2</sub> e/FTE
The University of Edinburgh	89,745	7,828	11.5
Academic estate	78,956	-	-
Accommodation	10,788	-	-

# **Annual Activity Data**

Source of Emissions		Value	Unit
Company-Owned Vehicles			
Fuel oil			
Distillate fuel oil		1,586	I
Other fuel(s)			
Diesel, retail station biofuel blend		137,773	I
Petrol, retail station biofuel blend		3,897	1
Vans			
Medium diesel van		2,172	mi
Premises			
Electricity			
Electricity consumption		81,744,520	kWh
Fuel oil			
Distillate fuel oil		165,696	I
Natural gas			
Natural gas consumption		241,979,817	kWh
Other fuel(s)			
LPG		130,097	I
Water supply			
Water supply		785,133	m3
Water treament			
Water treatment (Europe)		745,877	m3
Waste			
Composted waste			
Composted waste		278	tonne
Incinerated waste			
Waste, incinerated (heat recovery), MSW	1	16.2	tonne
Waste, incinerated (no heat recovery), M	SW	73.3	tonne
Landfilled waste			
Waste, landfilled, MSW		906	tonne
Recycled waste			
Waste, recycled		1,614	tonne
