

Winds of Change

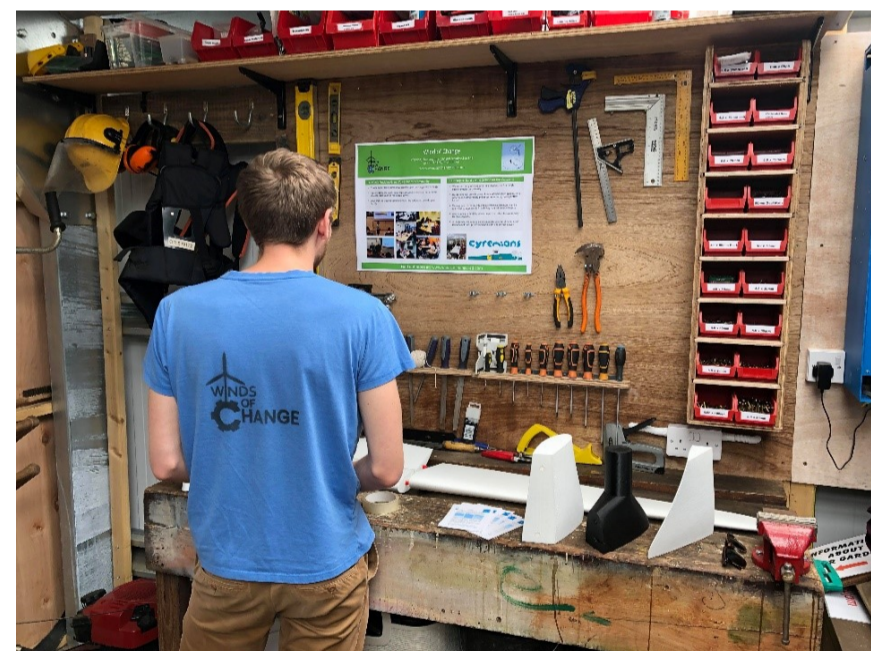

Proving that anyone can get involved in the clean energy revolution!

Our Goal: Providing Green Power for the Community

- Provide power for a community-based project creating positive change.
- Organise talks and workshops to get people involved and train the next generation of leaders in the zero-carbon community.
- Show that the student community can take action and contribute to the green energy transition.

Project 1: Wind turbine for the *Cyrenians*

- We are working with *Cyrenians*, an Edinburgh based homelessness charity, to find communities that need energy.
- Our turbine will provide power to one of their green spaces, for a water pump, power tools and, most importantly, boiling kettles to make tea!
- These green spaces are integral in creating a community and a safety net for people who have been experiencing homelessness.
- We are going to fund the whole project ourselves through grants to save money for the *Cyrenians*.

Project 2: Flat packed turbine for *Youth Vision*

- We are designing a modular flat packed wind turbine for *Youth Vision*.
- The working model will help students get involved and learn about renewable energy like wind power.
- The turbine will power a light bulb for interactive demonstrations.
